### **Abstract**

The subgenus *Uresipedilum* Oyewo & Sæther of *Polypedilum* Kieffer in China is revised. Ten new species, *P. (U.) basilarum*, *P. (U.) brevipilosum*, *P. (U.) bullum*, *P. (U.) crassiglobum*, *P. (U.) dilatatum*, *P. (U.) infundibulum*, *P. (U.) laterale*, *P. (U.) medium*, *P. (U.) prominens*, *P. (U.) xuei*, are described from male imagines. *P. (U.) paraviceps* Niitsuma and *P. (U.) surugense* Niitsuma are new records to China. *P. (U.) convictum* (Walker), *P. (U.) cultellatum* Goetghebuer are reexamined. *P. (U.) cultellatum*, *P. (U.) paraviceps* and *P. (U.) surugense* are new to the Oriental Region. A key to male imagines of Chinese species is presented. The subgeneric diagnosis is emended.

**Key words:** Chironomidae, *Polypedilum*, *Uresipedilum*, new species, key, China
