### Abstract

The genus *Tillicera* Spinola, 1841 is taxonomically revised to include fifteen species with the following species described as new: *Tillicera callosa*, *Tillicera michaeli*, *Tillicera obscura*, *Tillicera pseudocleroides* and *Tillicera tonkinensis*. *Tillicera mimomotilla* Pic, 1926 n. syn. and *Dasyceroclerus rouyeri* Pic, 1938 n. syn. are placed in synonymy with *Tillicera cleroides* Gorham, 1892, and *Tillicera hirsuta* (Pic, 1926) n. comb., is transferred from *Thanasimus* Latreille. A key to species is provided.

**Key words:** Oriental species, taxonomy, identification key, genital figures, distribution maps
