A species of *Brachypeza* Winnertz, 1863, *B. obscura* Winnertz, 1863 (fig. 1.) was recorded new to Norway in 2009 (Søli *et al.* 2009). The species belongs to the subgenus *Paracordyla* Tuomikoski, 1966. This subgenus was erected by Tuomikoski (1966) for this single species in his treatise of the tribe Exechiini. Tuomikoski also mentioned one undescribed species from Burma, which is still awaiting description.

**FIGURE 1.** Habitus of *Brachypeza obscura* (male). The specimen was captured in a Malaise trap located in a pine forest near Kongsberg, Norway. Photo Karsten Sund, Natural History Museum, Oslo (2008).
