Abstract

A catalogue of all the known genera and subgenera of the Coleoptera series Derodontiformia and Bostrichiformia, each with a single superfamily (Derodontoidea and Bostrichoidea, respectively), is provided. The following new tribes are established and type genera are designated: Apphianini Háva **trib. nov.**, Ranolini Háva **trib. nov.** (all Dermestidae); Ochlini Zahradník **trib. nov.**, Phanerochilini Zahradník **trib. nov.** (all Ptinidae). The subgenus *Paranovelsis* has been removed as a synonym and has been reelevated to generic rank. The following new synonymies are proposed: *Megatoma* Herbst, 1791 (= *Perimegatoma* Horn, 1875 **syn. nov.**, *Caucasotoma* Mroczkowski, 1967 **syn. nov.**); *Trinodes* Dejean, 1821 (= *Trinodus* Gistel, 1856 **syn. nov.**); *Nosodendron* Latreille, 1804 (= *Nosodendrium* Gistel, 1856 **syn. nov.**); *Casapus* Wollaston, 1862 (= *Pithodes* Wollaston, 1862 **syn. nov.**).

Key words: Coleoptera, Bostrichoidea, Derodontoidea, taxonomy, new tribes, new synonyms, new combinations, new status, catalogue

Introduction

According to Lawrence and Newton (1995), the series Bostrichiformia includes two superfamilies – superfamily Derodontoidea with only one family (Derodontidae) and superfamily Bostrichoidea with 6 families (Anobiidae, Bostrichidae, Dermestidae, Endecatomidae, Nosodendridae and Jacobsoniidae). Recently, Bouchard *et al.* (2011) divided the series Bostrichiformia into two series: series Derodontiformia, which includes Derodontidae, Nosodendridae and Jacobsoniidae; and series Bostrichiformia, which includes Bostrichidae, Dermestidae, Endecatomidae and Ptinidae. We follow the classification of Bouchard *et al.* (2011) in the present paper. Differences in classification between Bouchard *et al.* (2011) and other authors are outlined in the section Characters of Families.

A comprehensive catalogue of world genera of these two series and their constituent superfamilies and families has not been published in a very long time. The first and only complete world catalogue was published in the mid 19th century, a world catalogue was published in a series of papers by Gemminger & Harold (1868a, 1868b, 1869). Blackwelder (1945) published a catalogue of the Neotropical region, and the catalogue for the Palearctic region was published recently by Löbl & Smetana (2007). Separate catalogues were published for individual families by different authors (see family sections below). Many nomenclatural changes and the description of numerous new subfamilies, tribes, genera and subgenera necessitate production of a new complete catalogue to aid in taxonomic stability.

Through the end of 2011, Derodontiformia and Bostrichiformia included 417 valid genera (with 54 subgenera excluding the nominate subgenera)(Table 1) and more than 5000 species and subspecies with worldwide distribution. The names of original authors used in the following catalogue follow those provided by Schmitt *et al.* (1998). For entries in the catalog that contain more than one page reference for the original description, the first page number is the first page on which the taxon appears (generally in a key) and the second page number is the more typical page where the full description of the taxon begins. For categorization of distributions of taxa into biogeographic regions, the map published by Löbl & Smetana (2007) was used.
